Locking set

#### Model 2031—Premium

 ${\tt STEAMIX} \hbox{\it Model 203 Steam/Water Mixing Valve of brass/stainless steel construction.}$ 

STEAMIX® Model 2031P is supplied as standard with integral inlet supply risers comprising 3/4" Y-type strainers and 3/4" ball valves cross-linked by a stainless steel bridge piece and lever for simultaneous on/off control of both inlet supplies. The unit is supplied fully assembled and pressure-tested. Stainless Steel dual scale top mount Thermometer and Inlet Check Valves Included.

## Safety Features

- Steamix 203 will not pass live steam. In the event of either a complete failure of the inlet cold-water supply or a reduction in cold-water pressure to below 20 (+/-5) psi (1.4 bar), STEAMIX will respond with a complete shutdown of outlet flow.
- If there is a structural failure of the primary operating component (diaphragm), STEAMIX will "fail safe" to cold water.
- To prevent over-temperature selection by the user and the potential for overheated water and flash steam presentation common with other types of hose stations, STEAMIX is supplied with a single-temperature locking set.

### **Technical Specifications**

- 3/4" (20 mm) NPT inlets/outlet(s)
- · Brass/stainless steel construction
- · Operating pressures

Maximum: 150 psi (10 bar) Minimum: 20 psi† (1.4 bar)

- Maximum pressure loss ratio 10:1††
- · Inlet check valves included
- · Weight: 40 lbs (18 kg)

## † IMPORTANT NOTE: Lower steam pressures significantly reduce outlet flow rates.

†† Ratio of inlet pressures accounting for restrictions on valve outlet (minus back pressure).

### Flow Rates

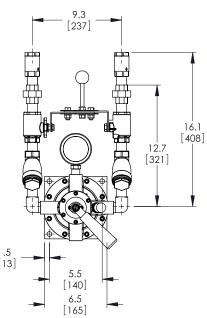

The capacity charts indicate STEAMIX 203 flow rates at steam and water pressures commonly available in the average manufacturing plant. The STEAMIX 203 can handle a wide diversity of pressures and temperatures. Three typical outlet temperatures shown in the flow tables were selected to demonstrate the valve's flow rate at:

- A) "User safe" temperature (approx. 120°F 48°C)
- B) "Hot hose down" temperature (approx. 150/160°F 65/71°C)
- C) "Common bacteria kill" temperature (approx. 180°F 82°C)

**NOTE:** All flow rates shown are with open outlet, and a reduction of flow is to be expected depending on the length and diameter of outlet pipework, washdown hose, spray nozzle, etc.
